COMPANY PROFILE

GAIAMED Co. Limited is a Hong Kong based private label medical manufacturer and strategic sourcing partner for healthcare distributors. We don't just supply healthcare products — we help our partners build healthcare markets.

We develop medical device and surgical lines for distributors who intend to lead their territory, under their own brand and at a cost structure that lets them win. Manufacturing and inspection take place in China, with commercial direction from Hong Kong and export logistics coordinated end to end.

Our commercial model is built on shared outcomes: your brand grows, our volume grows. Every quotation, registration dossier and shipment is prepared with that alignment in mind.

PRIVATE LABEL PROGRAM

Your brand. Our precision.

Distributors rarely lose to better products — they lose to products that look interchangeable. We build the opposite: a range that carries your name, your claims and your price architecture, manufactured to specifications your buyers can defend.

- **Artwork, carton, pouch and IFU designed for your market and your language**
- **Specifications adjusted to the grade and price point you intend to sell**
- **Registration documentation prepared before the first batch is released**

REGIONS SUPPORTED

Latin America & the Caribbean
Spanish and Portuguese labelling, registration dossiers and consolidated shipments.

Southeast Asia
Fast-moving consumable lines with regional artwork and local agent support.

Middle East & North Africa
Tender-ready documentation and specification matching for ministry procurement.

Europe & Central Asia
CE technical files, IFU translation and distributor-branded ranges.

Sub-Saharan Africa
Volume programmes, shelf-life planning and NGO-compatible packaging.

Oceania
Smaller, high-value launches supported by sampling and registration guidance.

QUALITY & COMPLIANCE

Distributors are audited by their own customers. Everything we release is designed to survive that scrutiny — batch records, certificates and technical documentation included.

Quality management

A documented QMS governing supplier qualification, in-process control, release testing and complaint handling across every division.

Testing & inspection

Internal testing plus independent laboratory verification before market release, with results available to your registration team.

Regulatory documentation

Technical files, certificates of analysis, free-sale certificates and ISO certificates supplied as a complete package per market.

Audit readiness

Manufacturing partners are qualified and periodically reviewed, and we support customer and authority audits on request.

HOW A PARTNERSHIP STARTS

Five steps from first conversation to first shipment.

01

Discovery

You share your market, your portfolio gaps and the volume you can commit. We sign an NDA when the conversation requires it.

02

Specification & sampling

We propose the product family, materials or configuration, MOQ and landed cost. Samples ship so your team can evaluate before you commit.

03

Brand & compliance

Artwork, IFU, labelling and registration documentation are prepared for your authority, in your language, under your brand.

04

Production & quality

Batch manufacturing under our quality management system, with in-process inspection and certificates of analysis released with the shipment.

05

Delivery & aftercare

Export documentation, freight coordination and replenishment planning — reviewed with you on a fixed commercial rhythm.

CALCIUM ALGINATE WOUND DRESSING 海藻酸钙伤口敷料

CWD-172

- These calcium alginate wound dressings are made of alginate fibres. When exudate from a wound comes in contact with the dressing, the sodium alginate present in the fibres absorbs the exudative fluid to form a soft gel. The soft gel is intended to create a moist wound environ-ment at the wound surface to promote wound healing. The gel formed by the dressing does not adhere to the delicate healing tissues in the wound bed.

CALCIUM ALGINATE WOUND DRESSING (RAPID GEL FORMING) 海藻酸钙伤口敷料

CWD-173

- These calcium alginate wound dressings are made of alginate fibres. When exudate from a wound comes in contact with the dressing, the sodium alginate present in the fibres absorbs the exudative fluid to form a soft gel. The soft gel is intended to create a moist wound environ-ment at the wound surface to promote wound healing. The gel formed by the dressing does not adhere to the delicate healing tissues in the wound bed.

SILVER CALCIUM ALGINATE DRESSING 海藻酸银钙敷料

SGD-174

- Silver Calcium Alginate Dressings and Ropes are soft, conformable wound dressings impreg-nated with Antimicrobial Silver. The silver-impregnated calcium alginate fibres, when in contact with wound exudate or blood, form a gel which creates a moist wound healing environment. The silver in the wound dressing has an antimicrobial effect upon various types of microorganisms including Staphylococcus Aureus and Escherichia Coli. Calcium Alginate Dressings with Antimicrobial Silver are sterilized and must not be re-sterilized. The products are sterile unless the package is opened or damaged.

BURN GEL DRESSING 烧伤凝胶敷料

BGD-175

- Burn gel dressing is impregnated with a 90% purified water, water-soluble gel. Sterilized by gamma radiation and with a 5-year shelf life, the dressing acts by drawing heat away from the skin surface preventing the heat from progressing deeper into the skin. The burn dressing also helps to relieve pain and protects the surface of the burn against airborne contamination.

HYDROCOLLOID DRESSING 水胶体敷料

HLD-176

- Hydrocolloid dressing is a sterile, extra thin or with border, conformable dressing made from hydrocolloids, which when in contact with the exudate, turns into a cohesive gel which helps preserve the wound's moist microenvironment, encouraging its cleaning and healing process-es. When used as instructed, the dressing is impermeable to water and blocks the passage of bacteria with excellent exudate management capacity.

HYDROCOLLOID FOAM DRESSING 水胶体泡沫敷料

HFD-177

- Hydrocolloid foam dressing is a sterile, conformable dressing made from hydrocolloid layer and soft PU foam layer, the hydrocolloid layer when in contact with the exudate, turns into a cohesive gel which helps preserve the wound's moist microenvironment, encouraging its cleaning and healing processes. The soft PU foam layer can increase the absorbency of the dressing. When used as instructed, the dressing is impermeable to water and blocks the passage of bacteria with excellent exudate management capacity.

HYDROGEL DRESSING 水凝胶敷料

HD-178

- Hydrogel Dressing is a semi-transparent flexible gel with ability of absorbing a minimum amount of fluid by swelling, but also donating moisture to a dry wound. This cool and comfortable dressing can accelerate epithelization as well as smooth pain. It is convenient for local application. Hydrogel Dressing is highly conformable and permeable to air and moisture vapor, which is usually indicated for dry wounds or minimum exudate wounds. It can hydrate dry wound beds and soften and loosen slough and necrotic wound tissue to promote debride☒ment and create a moist wound healing environment. Hydrogel dressing has also been shown to promote granulation and reduce the temperature of a wound bed.

AMORPHOUS HYDROGEL DRESSING 无定形水凝胶敷料

AHD-179

- Amorphous Hydrogel Dressing, which is gently re-hydrates necrotic tissue, facilitating autolytic debridement, while being able to loosen and absorb slough and exudate. It can also be used to provide the optimum moist wound management environment during the later stages of wound closure. It is non-adherent and does not harm viable tissue or the skin surrounding the wound. This makes Amorphous Hydrogel Gel ideal for every stage in the wound management process.

HYDROGEL GAUZE DRESSING 水凝胶纱布敷料

HGD-180

- Hydrogel gauze dressing is a hydrogel impregnated dressing on a soft, non-woven gauze pad. The dressing helps maintain a moist wound healing environment, promote granulation and epithelialization and promotes autolytic debridement. Hydrogel gauze dressing prevents dry gauze from coming into contact with the wound. The healing process of the wound is no callous, which can reduce the scar after the wound healing.

FOAM DRESSING 泡沫敷料

FD-181

- BFoam dressing is a kind of disposable sterile product, soft texture, and high fluid uptake. The main function of components in polyurethane foam products can absorb a lot of wound infiltration of liquid, maintain a wet healing environment for the wound, promote wound healing, reduce secondary damage when changing.

SILICONE FOAM DRESSING 有机硅泡沫敷料

SFD-182

- The Silicone Foam Dressing is a sterile multi-layer dressing with borders, composed of a four-layer hydroactive surface, for effective management of the exudate. The contact layer of soft silicone covers the entire surface of the product, assuring easy application and non-trau☒matic removal. In this way, the dressing maybe removed with ease, without damaging the wound and the perilesional skin, reduce the patient's pain. In addition, the silicone contact layer seals the wound's edges, protecting the perilesional skin from lateral exudate leaks and from maceration.

SILICONE WOUND CONTACT LAYER 硅胶缠绕接触层

SCL-183

- Silicone Wound Contact Dressing is an open mesh, soft silicone wound contact layer that allows exudate to pass through to the secondary dressing. And is designed for the manage☒ment of dry to heavily exuding wounds.

FRAMYCETIN GAUZE DRESSING 弗美西汀纱布敷料

FGD-184

- It is a sterile, lightweight paraffin gauze dressing impregnated with Framycetin Sulphate B.P 1% (Soframycin). Framycetin sulfate belongs to a group of medicines known as antibiotics. It is used to treat infected or potentially infected burns, wounds, ulcer dressing and skin grafts.

OIL EMULSION GAUZE DRESSING 油乳剂纱布敷料

OGD-185

- Oil Emulsion Wound Dressing consists of a non-adherent gauze mesh impregnated with white petrolatum in an oil emulsion blend. This primary dressing permits the flow of exudate without sticking to the wound bed. Conforms to all body contours. Nonadherent, use beneath a secondary dressing.

SILVER SULFADIAZINE GAUZE DRESSING 磺胺嘧啶银纱布敷料

SGD-186

- Silver Sulfadiazine Gauze Dressing is a non-adherent primary contact layer. The dressing consists of a cotton tulle impregnated with white paraffin and silver. It soothes and protects the wound to allow drainage onto a secondary absorbent dressing.

XEROFORM GAUZE DRESSING 静电纱布敷料

XGD-187

- Xeroform gauze dressing is a type of wound dressing and has ingredients of finely woven mesh gauze infused with a blend of petrolatum and 3% Bismuth Tribromophenate. This is a sterile single use device.

TRANSPARENT FILM DRESSING 透明薄膜敷料

TFD-188

- Transparent Film Dressings can be used to protect I.V. catheter sites and wounds, to secure devices to the skin and to maintain a moist environment for wound healing. They are breath☒able, waterproof and act as a barrier to protect against external contaminants including bacteria, viruses, blood, and bodily fluids.

ISLAND DRESSING 敷料

ID-189

- Island Dressings are sterile, self-adhesive, non-woven wound dressings incorporating an absorbent, non-adherent pad. Island Dressings feature a latex free, non-woven fabric which is coated with a hypoallergenic acrylic adhesive. The dressing is breathable, allowing good oxygen and moisture vapor exchange.
